

Persistent Systems

DevOps Engineer Interview Questions

Hyderabad Recruitment Drive | Candidate Experience

Content Creator: @DeepIntoDevOps (YouTube)

1 The Hiring Workflow

- **Stage 0: HR Screening** — Naukri Application, CTC, Notice Period, Relocation check.
- **Round 1: Technical Interview** — Tech Lead + HR Observer (35 mins).
- **Round 2: Advanced Technical** — Senior Architect (14+ years exp).
- **Round 3: HR & Culture** — Final Negotiations, Values, and Leadership.

2 Round 1: Technical (30-35 Mins)

Conducted on Persistent's proprietary meeting platform.

2.1 AWS & Infrastructure

1. **Security:** If the key pair is lost for an EC2 instance, how will you regain access?
2. **Monitoring:** How do you initiate and monitor the health of an AWS Target Group?
3. **Logging:** Explain the difference between Standard CloudWatch Logs and CloudWatch Logs Insights.
4. **Networking:** How does a service in a private subnet communicate with a public subnet service?
5. **Connectivity:** What is a Transit Gateway, and when is it preferred over VPC Peering?
6. **Governance:** What are the primary cost and budget management tools in AWS?
7. **DDoS:** How can you secure an application from a high-volume DDoS attack?

2.2 CI/CD & Jenkins

1. Compare various deployment strategies (Blue/Green, Canary) and their implementation in CI/CD.
2. How do you manage multi-environment pipelines (Dev/QA/Prod) within a single Jenkins instance?
3. What is the role of Jenkins Shared Libraries in reducing code duplication across teams?

2.3 Docker & Git

- **Git:** Explain `Git Rebase` vs. `Merge`. When would you choose one over the other?
- **Docker:** How do two containers communicate in a non-orchestrated environment?
- **Docker:** Explain the benefit of `Distroless` vs. `Alpine` images.

3 Round 2: Advanced Technical

3.1 Kubernetes (K8s) Deep Dive

- How do you handle backups for an EKS Cluster (stateful vs. stateless)?
- Explain **Taints and Tolerations**. Provide a YAML snippet logic for node affinity.
- What is the operational difference between **DaemonSets** and **StatefulSets**?

3.2 Scenario: Microservices Architecture

Problem Statement

Suppose you have an application consisting of 20 microservices.

1. Do we require 20 different CI/CD pipelines?
2. How do you manage versioning across these dependencies?

4 Round 3: HR & Negotiation

- Discussion on Persistent Systems' values, mission, and current leadership (CEO).
- Standard salary negotiations and notice period buy-out feasibility.
